

Motorcycle Manufacturer	<i>DUCATI</i>
Model	MONSTER 620, 800, 1000, 900 S4, S4R
Issue	09/03 rev. 00

Recommended siting	Remove the cover of the tool compartment under the seat and secure the alarm unit to the rear fender.
Power supply	Connect the positive and negative supply wires of the security system directly to the positive and negative terminals of the motorcycle battery.
Engine immobilisation (1)	Performed by the o.e. immobiliser.
Engine immobilisation (2)	Cut the RED/BLACK wire found in the 2-way connector of the harness coming out of the starter solenoid. This is bound to the frame, behind the leverage of the accelerator.
Ignition controlled positive supply	Connect to the VIOLET wire found in the black 2-way connector that is secured to the right frame. This connector is plugged in the harness of the microswitch of the rear stop.
Turn indicators	Connect to the WHITE/GREEN and WHITE/BLACK wires available on the rear turn indicators.
