

Motorcycle Manufacturer	 SUZUKI
Model	GSX-R 1300 HAYABUSA Year 2001
Issue	10/01 Rev. 00

Recommended siting	Secure the unit via one of the threaded pegs located under the rear fairing. The alarm unit should be sited with the cable exit pointing towards the tail light.
Power supply	Connect the positive and negative power supply wires of the alarm directly to the bike's battery.
Engine immobilisation (1)	Follow diagram B. Cut the ORANGE/WHITE wire located in the 4-way black plug connected to the fuel pump relay, on the left of the battery.
Engine immobilisation (2)	Cut the YELLOW/GREEN wire found in the 4-way grey plug connected to the starter solenoid, behind the fuel pump relay.
Ignition controlled positive supply	Connect to the ORANGE/GREEN wire found in the 2-way plug that is connected to the microswitch controlling the stop light.
Turn indicators	Connect to the BLACK and light GREEN wires of the rear turn indicators, found behind the left fairing, behind the voltage regulator.

Remark: to avoid backfeeds through the turn indicators, it is recommended to fit a diode to the ORANGE/GREEN wire connected to the flasher unit. The latter is sited in front of the fuse-box, on the left side of the handle-bar.
